TITLE : PASTE-LIKE COMPOSITION AND LAMINATE HAVING SYNTHETIC RESIN LAYER
PREPARED BY USING THE SAME

ABSTRACT : PROBLEM TO BE SOLVED: To obtain a delustering resin composition rich in volume feeling, capable of providing vivid white or color by preventing yellowing in heat treatment and a laminate of the resin composition.

SOLUTION: This paste-like composition contains a synthetic resin, a heat expandable microcapsule, hydrotalcites, a thermal decomposition type chemical foaming agent, as necessary further a plasticizer. This laminate is obtained by forming a resin layer containing the synthetic resin, the thermally expandable microcapsule and the thermal decomposition type chemical foaming agent on a substrate. In this laminate, a resin layer is made porous by heat-treating the resin layer and further, as necessary, uneven pattern is applied thereto.
